

# Matt Perano

## Director

**Matt Perano is an accomplished Project Manager and former Army officer who has managed a wide range of projects through every phase of the project lifecycle.**

Matt has had 10 years' experience in the New Zealand Army as an Officer in the Royal New Zealand Engineers as well as construction and

project management experience in New Zealand, Australia, and Afghanistan. This has provided Matt with leadership and management training and experience in a wide variety of challenging environments.

Upon leaving the NZ Army, Matt was involved in the Supreme Court project in Wellington NZ as a Site Manager. The role involved the day to day management of both structure and the interior of the 120-year-old heritage building.

Matt then joined Coffey Projects as a Project Manager. One of his first projects at Coffey was working on the Willis Central Building, primarily focused on the Engineering Services and the tenancy fit-out elements of the project. Matt also managed the quality control process of preliminary inspections and Practical Completion

inspections for the entire project. He then relocated to Adelaide with an internal transfer with Coffey, to further his professional development in Project management. In 2013, Matt became a Certified Project Manager, through the International Project Management Association.

Upon closure of Coffey's Project Management, he spent a small amount of time providing project management services to the Select Group before joining Jim Allen & Associates in 2014.

Matt's strengths are that he is an excellent communicator, is highly analytical and has strong leadership skills. This allows him to readily form relationships with a wide range of people.

Matt is a highly motivated and organised individual with an eye for detail, but also understands "the big picture" with an ability to think through issues to find solutions. He is highly pro-active and places importance on identifying risks and implementing actions before they become an issue. Matt's broad range of experience, together with his competence and knowledge, make him an asset to any project team.
